

Title:

Developing and testing an educational intervention to reduce self-reported anxiety levels amongst patients referred for Single Photon Emission Computed Tomography /Computed Tomography (SPECT/CT) imaging

Aim:

To develop and test the feasibility of an educational intervention to reduce self-reported anxiety levels amongst patients referred for SPECT/CT imaging.

Objectives:

1. Identify existing interventions used in healthcare that are potential target interventions for this scenario
2. Explore patient experiences of the procedure
3. Explore practitioner views of managing the patient experience of SPECT/CT imaging
4. Develop an intervention based on the experiences of the patients, practitioners and available evidence
5. Conduct a feasibility study and test the intervention

Overview:
